Tulchinsky argues that the traditional model of public health, which is focused on preventing and controlling infectious diseases, is no longer adequate to address the complex health challenges of the 21st century. These challenges include chronic diseases, such as heart disease, cancer, and diabetes; mental health disorders; and environmental health hazards.

Tulchinsky's new model of public health is based on the principles of health equity, social justice, and sustainability. He argues that health equity is

essential for achieving a healthy population. Social justice is necessary to address the root causes of health disparities. And sustainability is essential for ensuring that the health of future generations is not compromised.

Tulchinsky's book is a call to action for public health professionals to adopt a new model of practice that is focused on health equity, social justice, and sustainability. He argues that this new model of public health is essential for creating a healthier future for all.

About the Author

Dr. Theodore Tulchinsky is a professor of public health at the University of Toronto. He is a leading expert in the field of public health, and he has published extensively on the topics of health equity, social justice, and sustainability.
